OUR BUSINESS AREAS

The battery chargers from JK Medico can be used in a wide range of different situations where quality, safety and reliability are important.

Our battery chargers were originally designed and developed with the rehabilitation market in mind. Our chargers are there-

fore tested and approved in accordance with Medical Electrical Equipment Standard EN60601. The JK battery charger is probably the best quality charger on the market. As this is a high quality product, we have found that JK battery chargers are also well suited to other areas where quality and reliability are essential.

REHAB

Recharging of batteries in:

Electrical wheelchairs, in scooters, for electrical beds, for stair-lifts, in patient lifts, etc.

MARINE

Recharging of batteries in:

Sailing boats, in motor boats, in radios, in light or sound systems and in back-up systems for emergency equipment, etc.

AGRO

Recharging of batteries in:

Electrical farm machines, for electric fences, for water pumps, etc.

SERVICE & LEISURE

Recharging of batteries in:

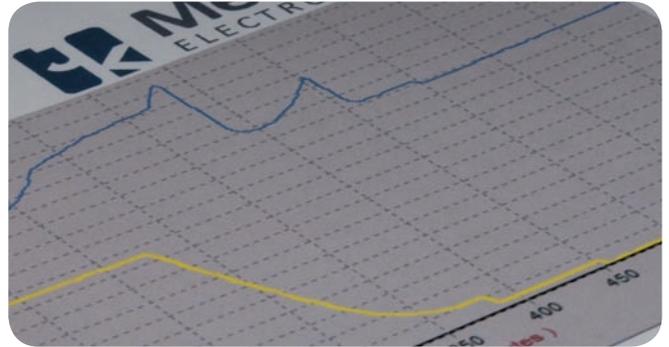

Leisure equipment such as golf carts, caravans, electric bicycles, electric scooters, etc. and in service equipment such as refrigerated container start-up systems, ambulance instruments, back-up systems, emergency lighting, etc.

PATENTED CHARGING PROCESS

Prolonging battery lifetimes

Sealed, maintenance-free lead acid batteries are the most frequently used energy source in electric wheelchairs and scooters. Shortened journey ranges and limited battery lifetimes are very annoying for end users. Furthermore, the need for frequent battery replacement places a heavy strain on operating costs. The cause of these problems is often an incorrectly or insufficiently charged battery.

J.K. Medico has developed and patented a new charging process to meet these challenges. The charging process has proved through practical use that it is capable of providing a marked prolongation of the lifetime of batteries, and that the user can enjoy a full journey range during the life of the batteries.

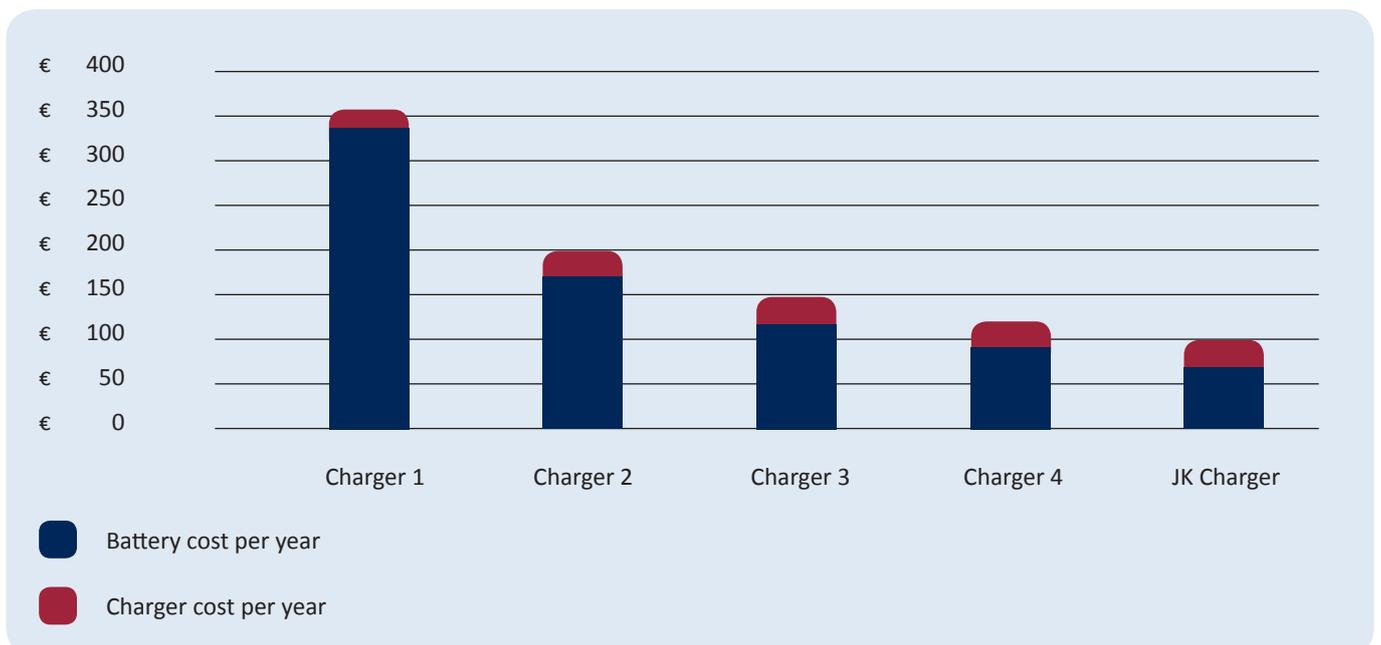

Thus, with J.K. Medico's charging process, user comfort is improved while total maintenance costs are minimized.

WHEN THE BEST QUALITY GIVES YOU A CUT IN EXPENSES

The replacement of a battery represents an extra expense and should be postponed for as long as possible. The JK Medico battery charger allows the user to benefit fully from the capacity of the battery. The graph below shows that the charger from JK Medico offers the lowest cost per day, week, month or year

compared to other battery chargers. The unique features of the JK charger, such as the patented charging method, prolong the lifetime of batteries. This is why it pays to use a battery charger from JK.

COST PER YEAR

KEY FEATURES OF THE JK CHARGERS

With their high level of quality, JK chargers are well suited to various applications where quality and reliability are essential to the performance of the batteries being charged.

We find that users' expectations regarding a battery charger are very similar across many different businesses

Reliable

The design and development of the JK chargers have been made for the user to be able to trust an efficient performance of the charger. Any user of the JK charger can be assured that the features of the JK charger will provide a fully efficient and trustworthy charging process.

Userfriendly

JK chargers are fault-protected and "intelligent". There are indicators for power level and battery faults.

Robust

The JK charger can withstand water, dust, shocks, heat and cold. JK chargers are tested and approved according to Medico directives

Low maintenance costs

JK chargers provide a reduction in expenses due to a patented charging process which will ensure maximum battery lifetime. They will eliminate the need for premature replacement of batteries.

ABOUT JK MEDICO

J.K. Medico aims to be at the cutting edge of development, supplying products that are more advanced than the accepted "state of the art". Products are designed, developed and manufactured on the basis on the company's own research combined with feedback from customers and end-users.

J.K. Medico cooperates with qualified external advisers on relevant matters in order to have all necessary resources and competences available at any time.

Product development is carried out in accordance with the company's own quality assurance system.
